

meet the new face in facades

terracotta the new look

Terreal, already established for its terracotta roofing products in Singapore and in Asia Pacific now opens up a whole new world of wall cladding possibilities for architects and designers.

Whether you're looking for fresh ideas in ventilated facades, versatile acoustic wall cladding or sunscreens, Terreal's extensive range provides new inspiration.

The cladding systems, which offer light weight and rapid fixing, exploit the natural qualities of terracotta with many colours and finishes to create exciting new external and internal environments.

And of course, quality and performance are built-in, as you would expect from a company with Terreal's reputation – the European leader, with 27 factories serving 50 countries and a turnover of €450 million.

fresh ideas in ventilated facades

Rediscover the natural advantages of terracotta. Its strength, thermal insulation, ease of installation and aesthetics, combined with the wide range of modules, colours and finishes make environmentally friendly Terreal's wall cladding ideal for creative exteriors and interiors.

The range of modular options make Terreal wall cladding an integral part of striking architecture

1 Zephir®

Lightweight cladding with open joints for a well ventilated facade. Zephir can also be combined with Phoniceram for acoustic applications.

2 Blizzard

Small-dimension, single-skin rainscreen product in terracotta, Blizzard is the last product launch. Its format makes it lighter and easier to install and also more cost-efficient than other long dimension products with overlapping horizontal joints.

3 Maestral®

The first wide format cladding tile on the market, this impact-resistant product, offers excellent ventilation and insulation. Subtly protruding mountings emphasise the vertical section.

4 Piterak Slim

New product of Terreal, Piterak Slim is a double-skin long dimensioned rainscreen cladding product (up to 50 x 180cm) with overlapping horizontal joints. The overlapping format provides greater protection against bad weather and throws the façade into relief and continuity.

subduing light with sunscreens

Terreal terracotta sunscreens systems provide real solar protection and solution to reduce energy air conditioning cost.

4. Shamal

Long dimensioned sunshade made in shape of an aeroplane's wing. It provides real protection from the sun with improved thermal insulation of buildings. The shamal comes with its own anti-corrosion fixing system, and its available in two finishes: smooth or sanded, and seven colours.

1. Autan

Square section sunshade, dimensions 53x280x50 mm. Terracotta elements threaded on to a metal tube.

2. Harmattan

Ovoid-section sunshade, dimension 30 x 300 x 41 x 86 mm. Terracotta elements threaded on to a metal tube

3. Zonda

Rectangular section sunshade, dimension 60 x 330 x 150 mm. Terracotta elements threaded on to two metal tube.

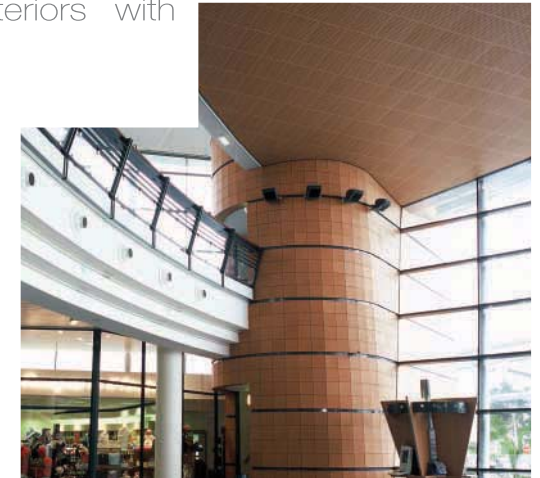

5. XL format

Autan and Zonda are now existing in large formats, called XL. Autan XL is available in 100, 120 and 150 cm length (5 cm width) as for Zonda which is 10 or 15 cm width.

hear the difference in acoustic wall cladding

Whether it's an office, theatre, school or swimming pool, Terreal has wall cladding solutions to absorb sound, meet regulations and create impact-resistant interiors with endless design possibilities.

The variety of formats and modules offer endless scope for designs. possibilities

1 Phoniceram

Perforated panels with horizontal or vertical openings, for sound absorbing walls.

2 Phonbrick

A perforated tile with absorbent acoustic filling, ideal for public spaces.

4 Acoustic Shingle

Larger format, high-strength perforated panels with high-density rockwool filling. Equally effective in an interior or motorway sound barrier.

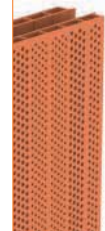

3 Acoustic Brick

An ideal sound-absorbing brick with fibre filling and an attractive perforated face, for double- and load-bearing partitions.

5 Monolithic Brick

Versatile structural bricks with interlocking profiles, for internal or external sound-absorbing screens.

When size matters, Terreal is the only company capable of making structural monolithic terracotta bricks up to 2.8m.

choose your colours

Terracotta's natural tones have timeless appeal. Now Terreal's new range of contemporary colours hugely expands the choice for designers, whether it's creating a warm and friendly ambience for an auditorium or a bold, avant-garde architectural tatement.
