Terreal Dry Fix Premium

HIP AND RIDGE SOLUTION

General information

On a pantile roof the hip and ridge roll has to be applied with minimum 5 cm overlap. Beaver bricks can be layed without overlap. The substructure has to be dry and clean and the application temperature should be at least + 5°C (+42°F). Please store in a cool and dry place.

APPLICATION STEPS

STEP 1

- Place the roll well centred on the ridge batten
- Fix it with staplers or roofing nails on the ridge batten

STEP 3

- Press the roll step by step on the tile surface
- Stretch the corrugation downwards from the top to the tile valley
- Thoroughly press down the edge region

STEP 2

- Remove the protective foil from the butyl adhesive strip

STEP 4

- Cut the remainders with a knife or plate scissors
